

**The Ultimate Tool
for Glass Installers
and Builders:**

SPIL Glass Configurator

24/7 support line

Software supports
in any language

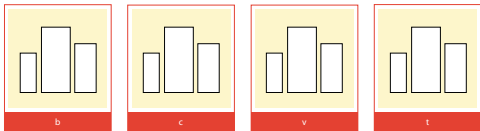

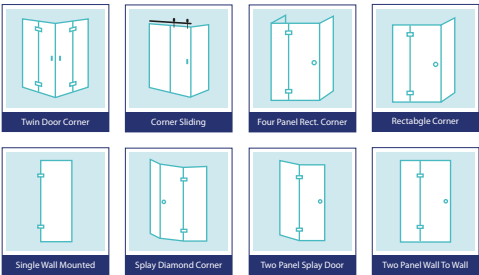

SPIL configurator is inbuilt in SPIL OPTI which helps product sellers and installers to make their job easy. SPIL Configurator can build products, estimate, quote, create works order and job cards to ensure that the production is taken care of.

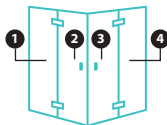

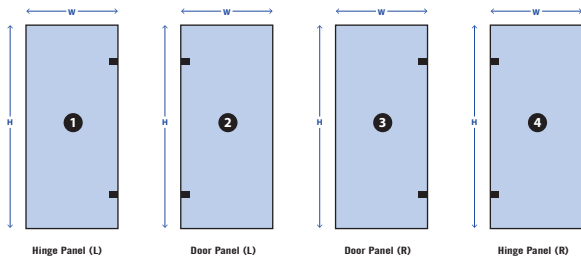

Our configurator has several pre-loaded glass templates and you can add different size, thickness of glass and hardware with costing. Not only the product costing but also the process costing such as corner cut-outs, holes, rakes etc. can be tracked and identified using the SPIL Configurator.

Features and Functionality of SPIL Configurator

- ▶ Ideal for creating shower glass, with a variety of features to help you design and visualize your projects.
- ▶ Create reusable templates to save time and effort when designing new projects.
- ▶ Create templates with multiple panels, so you can easily design complex showers.
- ▶ Include a variety of cutouts, notches, and holes in your designs, to accommodate different hardware fittings.
- ▶ 3D visualization with 360-degree animation, to see the designs in real-world context.
- ▶ Generates instant quotes with itemized costing, so you can easily get a price for your projects.
- ▶ Export quotes to PDF, with detailed drawings and measurements.
- ▶ Export shapes directly to WaterJets and CNC machines in DXF or DWG formats.
